

CHAPTER 06

Biodiversity and its Conservation

Recycling of paper:

- As papers are valuable products made from a green source, which is decreasing day by day we should use it carefully.
- To make a ton of paper around 15 – 25 trees have to be cut down, wasting paper or using more paper means felling more number of trees causing deforestation.
- Using more paper involves using more chemical that is harmful to us and nature too. Another interesting fact is that the paper can be reused by recycling it 5 – 7 times.
