

CHAPTER 01

What is Science?

Using science process skills:

- Whenever scientists are trying to find answers for a question (or) experiment. They use thinking tools called process skills.
- We use these process skills when we speak, listen, read, write and think.

Reading to learn:

- In order to investigate on the topic scientists use reading, writing and numbering their work.
- They need to do research and read everything about the topic.
- In order to read and understand the topic, scientists must know science vocabulary.
