

Explanation:

In this essay we would learn about the oldest discipline of engineering i.e. Civil Engineering. The Civil Engineers are behind the great infrastructures of the nation. One can definitely say that behind the nation building these civil engineers play a huge and great role. This essay by S. S. Rao, tells us about the many facets of civil engineering. There are many branches of civil engineering. Different departments of civil engineers look after the different work and development. Civil engineers are multifaceted, taking on roles and responsibilities that are varied. It is a very huge branch which involves designs, construction and management of infrastructure, highways, railways, airports, etc. Almost after every project, there is a huge contribution of a civil engineer. Earlier, the civil engineers would focus on only production site, plans, cranking out drawings etc. But these days things are more sophisticated.

This is one such a branch where job opportunities exists in design offices, consulting firms, government departments such as municipalities, environmental agencies as well as with contracting firms.
